

## Science is Constantly Changing

When everyone believed that the world was flat  
The scientists agreed, it was stated fact  
But someone came along and said that's just not true  
And I know a way I can prove it to you  
And it was America that he found  
Now everybody knew that the world was round

Chorus:  
Science is constantly changing  
What we know right now won't stay the same  
Each new discovery means things will have to change  
Science is constantly changing  
We may find out we were just not right  
New evidence may show things in a different light  
Science is constantly changing

When everyone believed planets were held in place  
By an invisible shield in outer space  
Someone came along and said that's just not true  
And I know a way I can prove it to you  
With his calculations and geometry  
Everybody knew it was gravity

Chorus:

When everybody thought that the planets were nine  
For 75 years everything was fine  
But some people came along and said that's just not true  
And we know a way we can prove it to you  
With satellites and telescopes they made their case  
And everyone agreed the planets were eight

POOR PLUTO

CHORUS:
